LOGIT

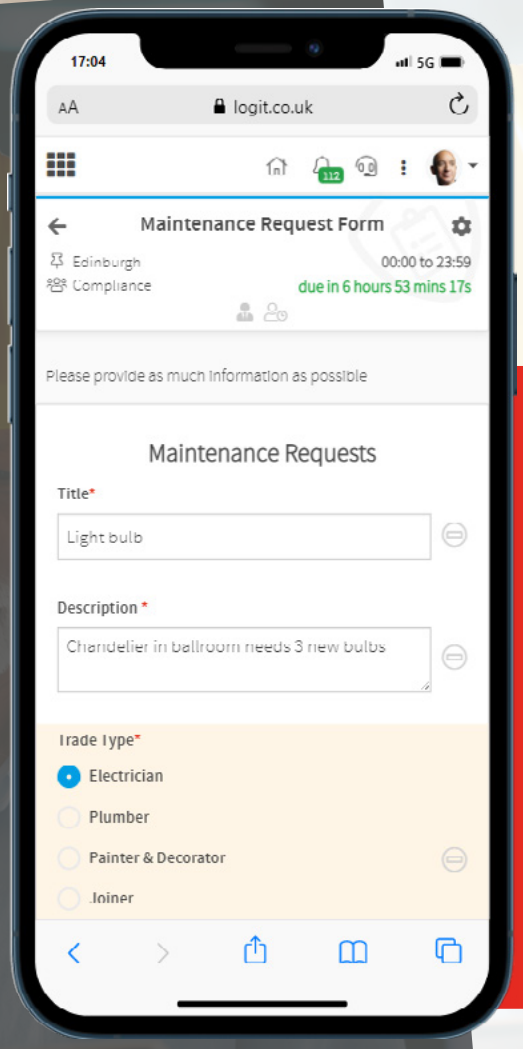
MAINTENANCE *PPM & CAFM*

Improve performance, **minimise** downtime, **maximise** asset lifecycles and **increase** customer satisfaction

Spreadsheets, paper diaries, and out of date legacy solutions are inefficient and can result in increased failures and maintenance expenses.

These are reasons why leading companies are switching to the market's most advanced all-in-one digital solution. Logit simplifies the way you manage maintenance by enabling your team to quickly report on and respond to issues or requests from the palm of their hand. Our slick all-in-one platform also allows your team to proactively schedule and track all preventive activities across departments and sites.

Logit keeps maintenance running like clockwork



Eliminate all the paper forms, emails, maintenance books, spreadsheets and phone calls from a perturbed manager. All you need is one easy-to-use guest & staff interactive solution that provides a seamless, end-to-end process from maintenance request to completion.

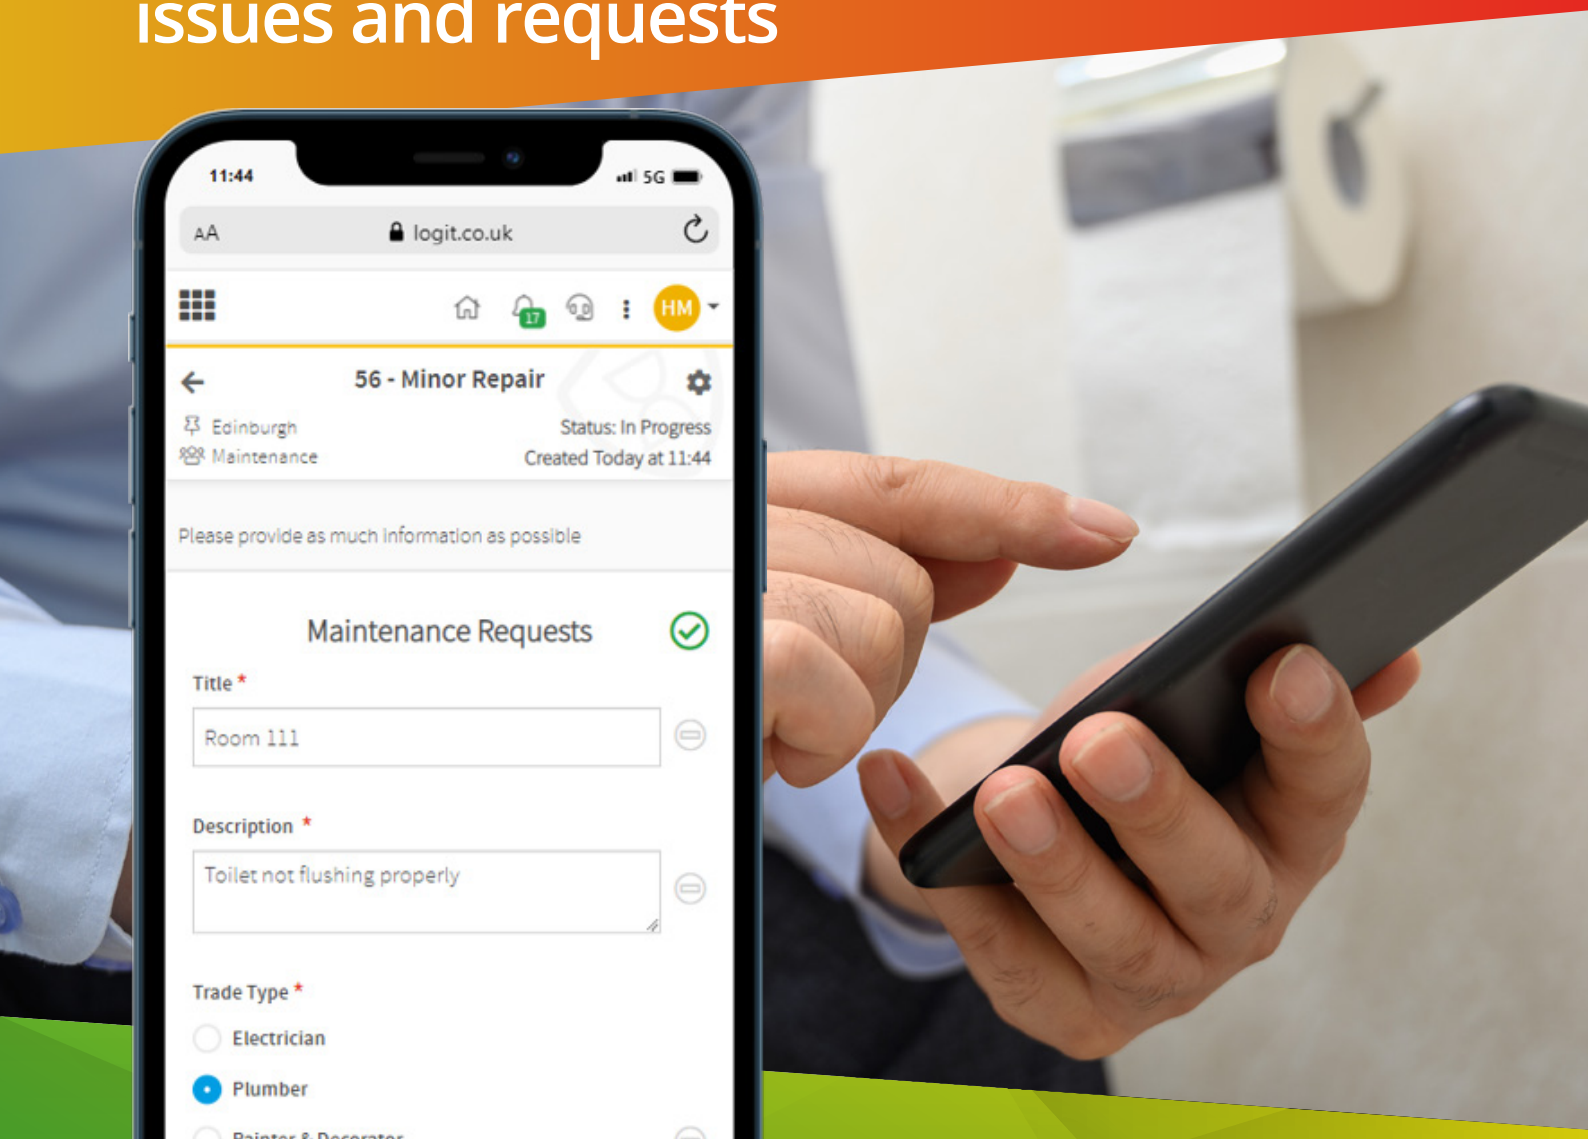
Give managers the visibility they need to raise actions, prioritise activities, delegate tasks to team members, share information to engineers and track performance.

- Report issues and submit requests directly to maintenance from any hand-held device.
- Once an issue is reported, it can be actioned, delegated, tracked & reported on across sites.
- Create daily/weekly/ad hoc schedules.
- Scan QR codes to record and manage complete work order lifecycle.
- Visiting engineers can seamlessly interact with any asset record.
- Generate reports and view dashboards to track trends, costs and performance.

Managers can proactively take action, allowing for quicker repairs and reducing downtime that can save your business up to 20% per site each year.

Our interactive maintenance reporting tool provides accurate details that can be shared with the maintenance team or contractor including photos, asset tagging and key information to help prevent costly investigation, unnecessary repairs and downtime. Logit also automatically schedules inspections and escalates problems, ensuring the right people know what to do and when to do.

Quickly respond to maintenance issues and requests

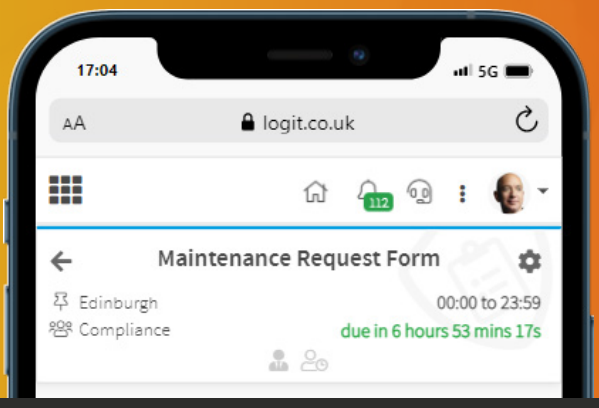


It's easy for everyone to use and teams will be confident that all the work is being performed correctly and nothing gets misplaced or forgotten.

- Update status instantly and alert relevant team members.
- Attach SOPs, photos, and a list of suggested parts to work orders so that engineers have access to everything they need to get the job done quickly and easily.
- Add images and comments with the click of a button.
- Complete scheduled tasks on-time and pass audits effortlessly.
- Track requests in real-time.
- Raise and prioritise actions.
- Quickly delegate each task to the right engineer.
- Report issues and submit work requests using any hand-held device.

Use QR codes to enhance customer & third party interactions

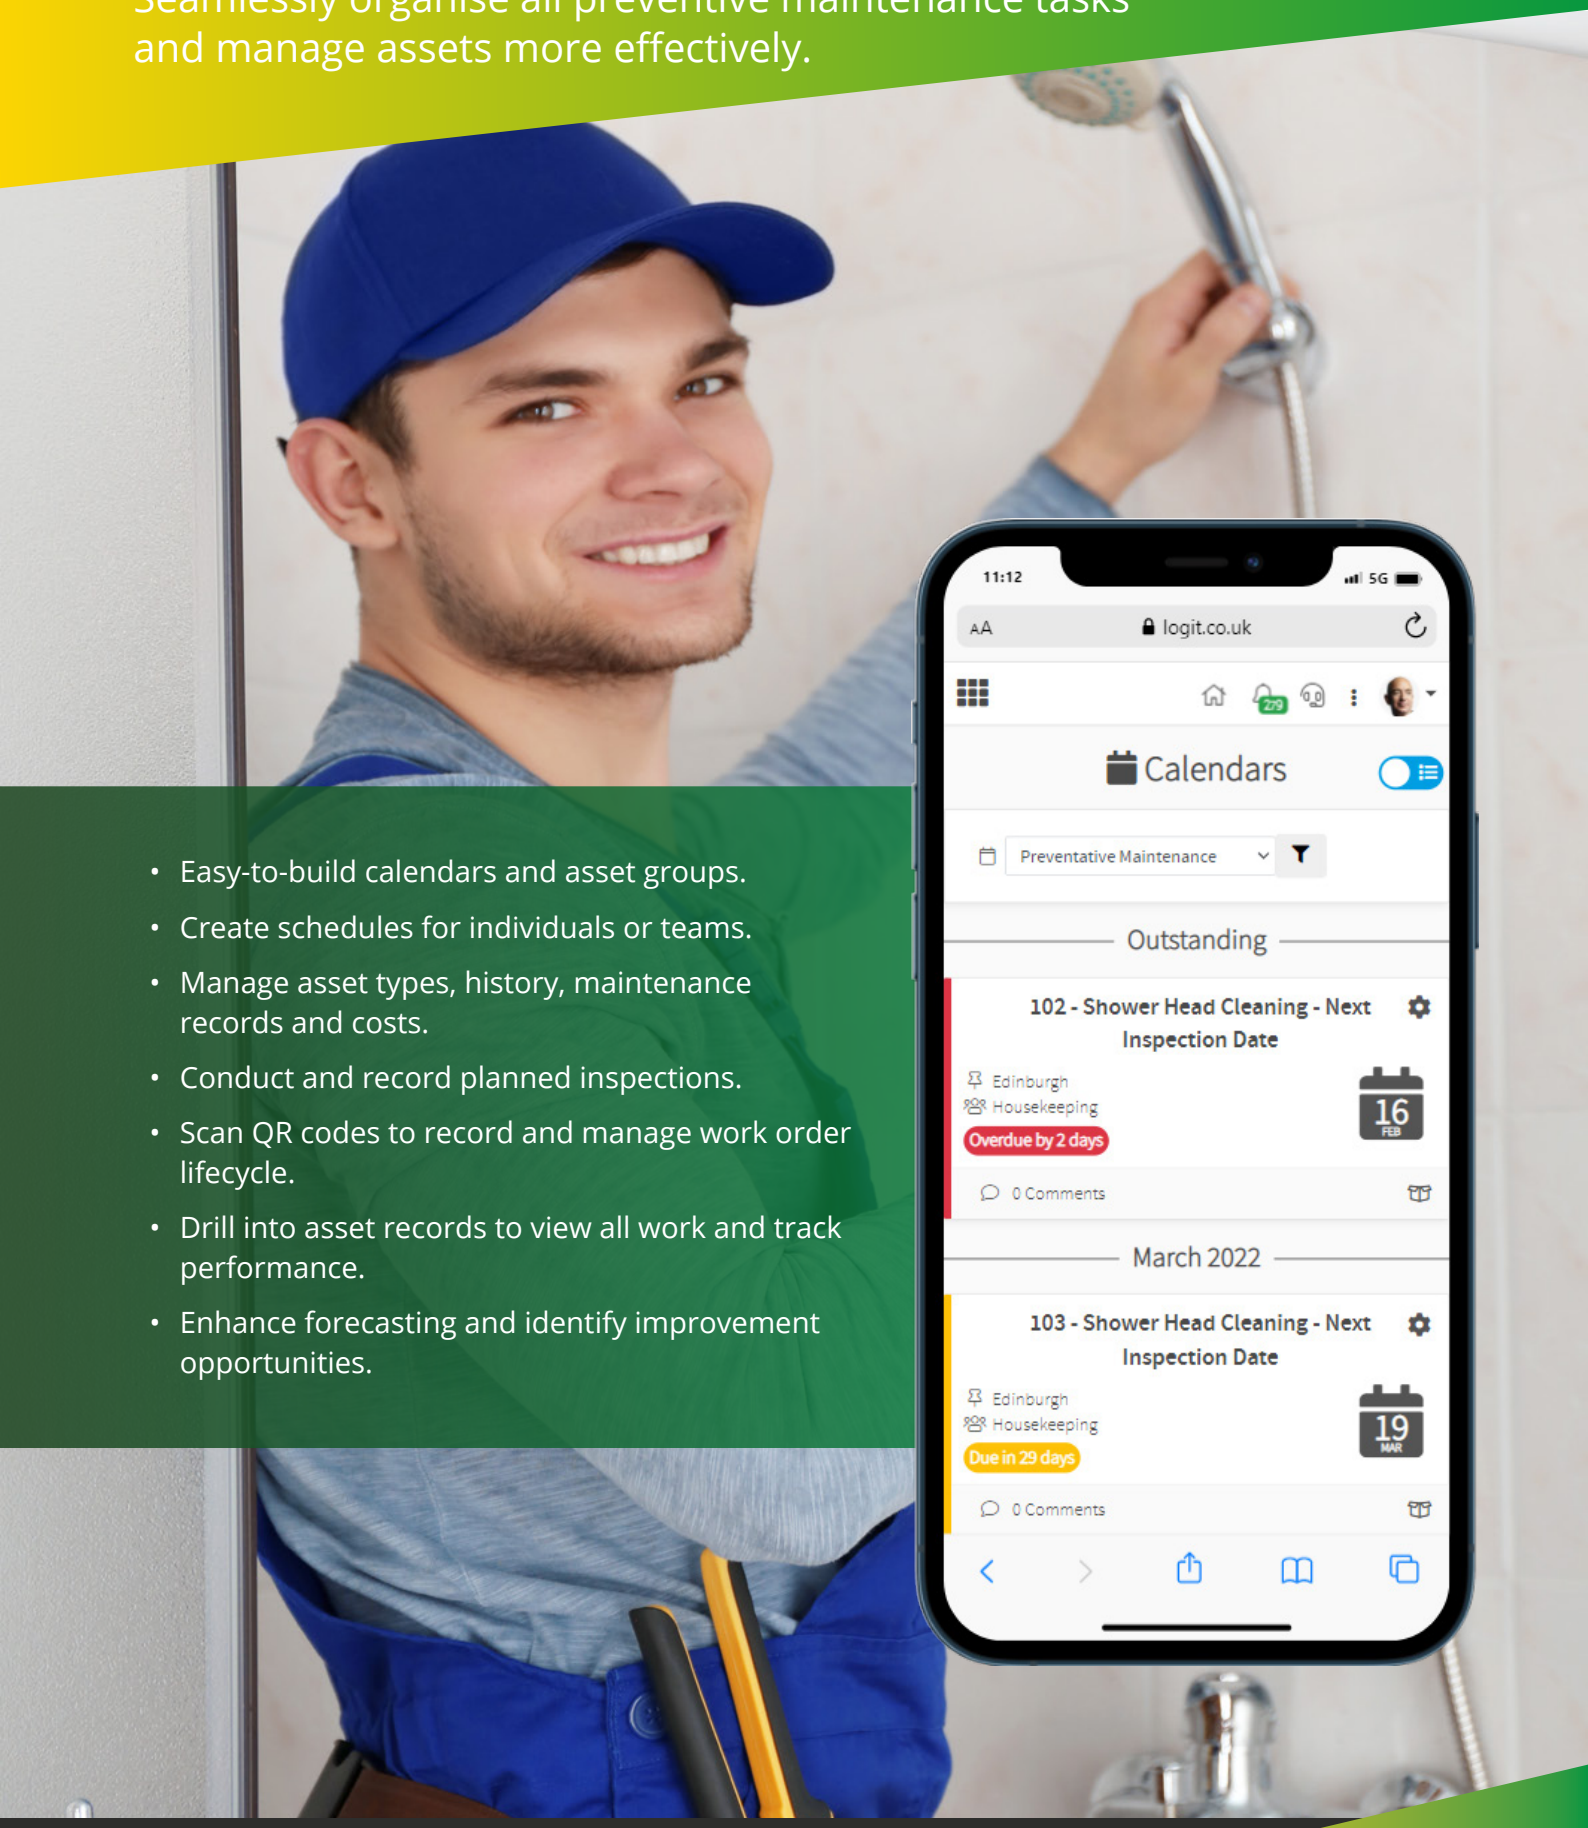
Logit's QR codes make it simple for guests and visiting engineers to report and respond to maintenance issues. They'll save time and frustration by not having to call the front desk or searching for staff.



- Users and guests can submit unlimited requests.
- Simply scan a QR code to report any maintenance issue or record and manage complete work order lifecycle.
- Customers will be more likely to report an issue when it's easy and takes less time.
- Visiting engineers can seamlessly interact with any asset record.
- Guests will be happier and more inclined to give your business a positive review.

Proactively schedule and track all planned maintenance activities

Seamlessly organise all preventive maintenance tasks and manage assets more effectively.



- Easy-to-build calendars and asset groups.
- Create schedules for individuals or teams.
- Manage asset types, history, maintenance records and costs.
- Conduct and record planned inspections.
- Scan QR codes to record and manage work order lifecycle.
- Drill into asset records to view all work and track performance.
- Enhance forecasting and identify improvement opportunities.

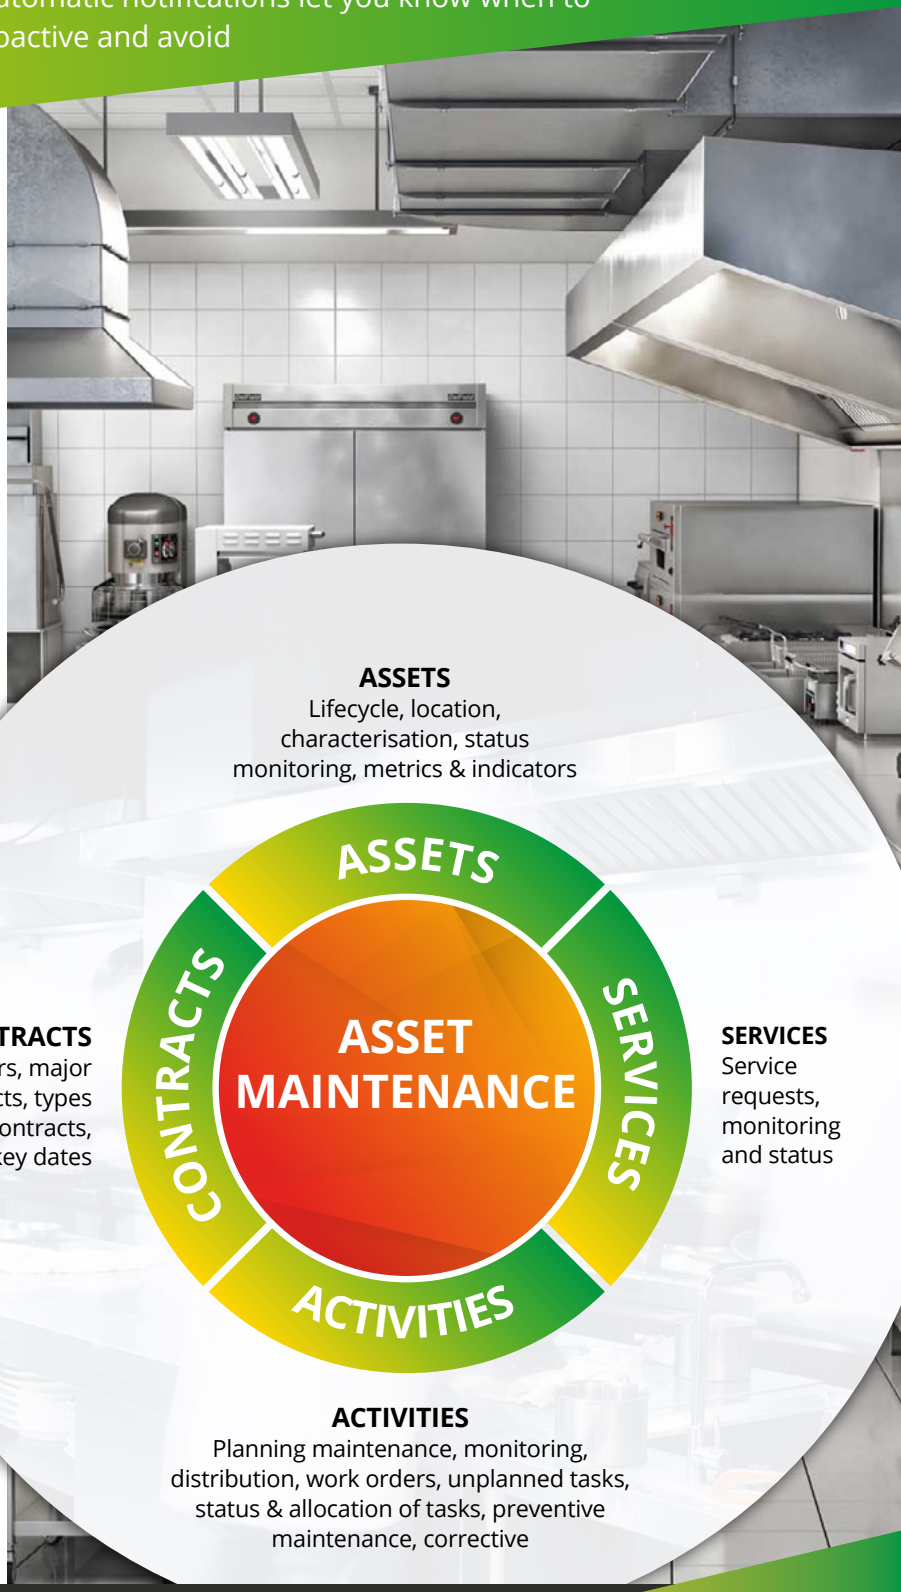
Asset Management

Easily organise, track and optimise asset performance

Transform how you track and manage assets in one centralised place – everything from repair history and cost to service requests, work orders, scheduling, and downtime.

Our flexible asset management module allows team members to easily manage assets without the need to sort through spreadsheets or search for files. Nothing gets missed because all the information is right at your fingertips. Automatic notifications let you know when to take action, enabling your team to be proactive and avoid unplanned disruption.

- Streamline processes and guide in-house maintenance teams to critical tasks and data.
- Create, customize, and attach QR codes to any asset, part or work order. Scan them with a mobile device to instantly view asset information.
- Organize users, assets, inventory, purchases and tasks by location.
- Plan, schedule, and trigger tasks and get real-time updates and KPIs from each site.
- Group similar assets into categories so that you only have to schedule, assign, and track tasks and reports one time.
- Enhance your return on investment with financial and performance analytics.



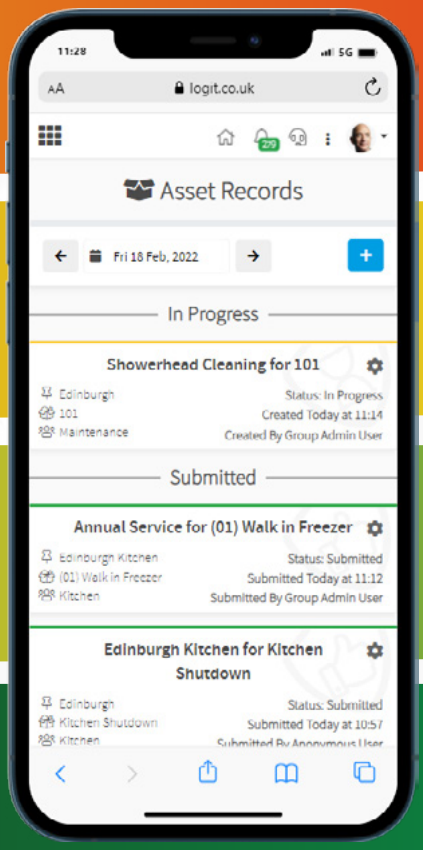
Key Features

Digital Checklists

Customizable digital checklists and forms including the ability to attach images, pass/fail inspection, etc.

Submit Requests

Submit requests and execute WOs from any mobile device.



Action

Action, delegate, track and report on issues across departments and sites.
